EDUCATION

Drexel University

Bachelor of Science in Computer Science; GPA: 3.70/4.00

Philadelphia, PA

September 2024 – June 2029

- Relevant Coursework: Data Structures & Algorithms, Systems Programming, Software Engineering, Web Development, Linear Algebra, Multivariable Calculus, Differential Equations, Physics III

EXPERIENCE

Dakdan Worldwide

Software Engineer

Remote

September 2025 – March 2026

- Built a RAG-based website assistant using LlamaIndex, Qdrant, and Perplexity to classify user intent and route qualified inquiries to a lead-tracking dashboard.
- Developed Flask middleware for the Fanz backend to validate incoming request data, checking required fields, converting types, and rejecting malformed requests before they reached the database.
- Built a Jenkins CI pipeline triggered by GitHub push and pull-request webhooks, configuring the Jenkinsfile to automate dependency installation, linting, unit testing, and Docker image builds.
- Automated HR email prioritization and routing through n8n, reducing administrative bottlenecks by 40% and accelerating onboarding-related communication handling.

PROJECTS

Food Finder | TypeScript, Prisma, Socket.IO, Google Cloud Run, Render

July – Present

- Built real-time lobby chat and restaurant voting with Socket.IO, synchronizing group decisions without page refreshes.
- Designed a relational PostgreSQL schema and RESTful API with Prisma to model users, lobbies, votes, and restaurant decisions.
- Implemented JWT-based authentication and bcrypt password hashing to secure user sessions and protect private user, lobby, and restaurant voting routes.

AnimY | React, Express, Supabase, TanStack Query, Vercel, Render

November 2025 – April 2026

- Synced search-filter UI state with URL parameters as a single source of truth, enabling persistent, shareable filters and consistent data fetching across sessions.
- Engineered an Express.js cache-refresh layer that synchronized stale Supabase records with the Jikan API, reducing redundant external API calls by over 50% while respecting rate limits.
- Used TanStack Query for server-state caching to reduce unnecessary refetches and repeat navigation latency by approximately 300 ms.
- Implemented Supabase Auth and Row-Level Security (RLS) to secure user data and maintain persistent, personalized dashboard sessions.

Bank System | Java, JUnit, Gradle, GitLab CI

June – August 2026

- Developed a Java banking system through test-driven development, writing 150+ JUnit tests for account, validation, and command-processing logic.
- Achieved a 95% mutation-testing score with PIT, killing nearly all injected code mutants.

Ascension | Python, Pygame, GitLab, Kanban

January 2025 – June 2025

- Collaborated with a 4-person team to build a custom 2D platformer, implementing a collision system using AABB detection and continuous gravity updates for smooth player movement and collision behavior.
- Led weekly Agile sprints, prioritized tasks with Kanban, and coordinated GitLab version control and code reviews.

TECHNICAL SKILLS

Languages: Python, Java, TypeScript, JavaScript, C, HTML/CSS, SQL, Bash, Racket

Frameworks/Libraries: React, Express.js, Flask, Prisma, TanStack Query, JUnit, LlamaIndex, Pygame, Socket.IO

Tools/Platforms: Postman, Git, GitLab CI, Jenkins, Docker, Supabase, Qdrant, n8n, Vercel, Render, Google Cloud, Antigravity
